## 4600 Series

### The Possibilities are Endless

The 4600 series combines the widest variety of features with excellent performance capabilities. Choose from a wide variety of colors, EuroWood™ finishes, and handle types. Double pane glass with LoE and argon is standard with EuroLine. Upgrade to triple pane with LoE and argon, and you have one of the best window series the world has to offer.

The 4600 series is used extensively in high-end residential projects because of its unprecedented quality and fantastic customizing capabilities. Over 40 years of development have gone into the making of 4600 series of windows and doors. The result? A superior product.

#### Tilt and Turn

The 4600 series features Tilt & Turn operation. Windows turn in for safe and easy cleaning, rapid ventilation, and emergency exits. Windows tilt in for comfortable, draft-free ventilation.

All EuroLine windows and doors feature multi-point locking hardware that seals out harsh weather and makes it virtually impossible for intruders to break into the home.

# A BEAUTIFUL WAY TO OPEN ROOMS

## The best quality material available for windows and doors

### Made of Superior uPVC

The 4600 series of windows and doors are made from high quality REHAU uPVC. The process by which the uPVC is mixed together makes it stronger and less brittle than other types of PVC. Most importantly, it won't make your family sick. And it's recyclable.

High impact-resistant uPVC is essential during transportation and installation when window frames are subjected to bending, and when they are exposed to low external temperatures in winter. Under these conditions, regular PVC would crack. Cracking is much less likely in uPVC.

uPVC polymers exhibit outstanding light and weather resistance as well as high color durability. After 10,000 hours of exposure in the Weather-Ometer, no change in color is discernible, the notch impact strength is scarcely altered and there is no visible change in surface gloss.

### Glass Types

Windows are among the most critical parts of a building.

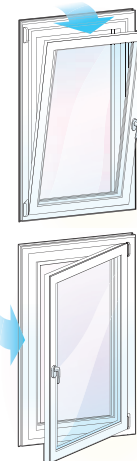

They provide light and view for a pleasing visual connection to the outdoors, give the building facade character, and serve an expressive function inside and out.

Every 4600 Series comes with insulated glass consisting of two 4 mm glass panes. One of the panes has soft coat LoE and the space between the panes is filled with argon gas. Triple pane is also available. The following types of glass are used in 4600 Series windows:

- **Clear** – provides maximum light transmission
- **Low Emissivity (LoE)** – reduces heat loss and allows moderate solar heat gain
- **Obscure** – adds privacy where window coverings are not practical or undesirable

- **Tinted** – softens internal glare, increases privacy and reduces internal heat gain
- **Laminated Safety** – keeps glass in place should breakage occur
- **Tempered Safety** – resists breakage from impact or windload
- **Argon Gas** – increases energy efficiency and is standard in all EuroLine windows and doors

Uncompromising quality – that's what EuroLine is all about.

### Tilt & Turn

#### Tilt

Windows can be tilted to provide comfortable, draft-free ventilation.

#### Turn

Window opens inward for easy cleaning and maintenance.
