

# Introducing a new standard of environmental responsibility

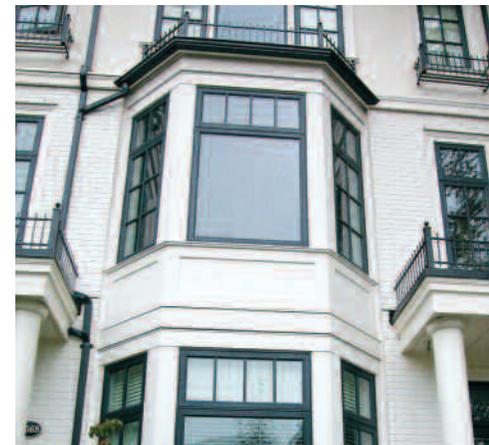

The GREEN APPROVED symbol is a reflection of EuroLine's commitment to maintaining high standards of environmental responsibility in product manufacturing as well as during a lifetime of product performance

## Some examples:

- EuroLine windows and doors are made of a high-density, pore-free uPVC material that is easy to clean, never needs painting and, unlike ordinary vinyl, will never rot, split, warp, chalk, fade, yellow or grow brittle with age. Since these windows and doors contain no heavy metals or toxic plasticizers, they don't release vapors, gases or particles into the air - an important consideration for people with allergies or health concerns. As a result, EuroLine windows and doors are ideal for installation in hospitals as well as residential applications
- EuroLine windows and doors are made with a Health Smart® all-foam warm edge Super Spacer® insulation system. Due to its flexible foam, high-performance acrylic adhesive and vapor barriers, the SuperSpacer® dual seal design is the most failure-free spacer system available today.

The all-foam formula of Super Spacer® blocks the heat escape path and

provides one of the best thermal performance records in the industry. The result is reduced energy costs, ensuring durability, added comfort and value to your home.

# A NEW STANDARD OF ENVIRONMENTAL RESPONSIBILITY

- High-density, pore-free vinyl is easy to clean and will not support the growth of mold or mildew
- EuroLine utilizes a 70mm, 5-chamber design for the entire line of tilt & turn windows, resulting in higher frame/sash thermal efficiency, stronger corner welds and improved stability
- EuroLine provides windows and balcony doors with up to 12 locking points that literally pull the window or door into the frame for a solid air-tight fit. The result: a dramatic reduction in energy loss and noise pollution
- EuroLine windows and doors utilize a true pressure-equalized rainscreen design to make water penetration virtually impossible
- EuroLine makes extensive use of LoE coatings for added thermal efficiency and energy savings
- Where facilities are available, the uPVC material used by EuroLine to construct its windows and doors can be safely recycled
- EuroLine windows and doors utilize a double gasket system to minimize energy loss while also providing unprecedented protection from rain, wind and noise
